Noël, Noël !
Le père du même nom vient de déposer des tas de petits PAK dans mes chaussures.
J'en attends de nouveaux pour le jour de l'An.
Alors n'hésitez pas à envoyer vos programmes de 2 ko sur papier, K7 ou disquette.

TIRELIRE

Michel BEAUVOIS

TIRELIRE est un utilitaire destiné aux enfants. Les octets remplaçant la monnaie ! Aucune difficulté quand à son utilisation, le nom du fichier TIRELIRE étant le prénom de l'enfant ...

CAT 8

Michel BEAUVOIS

CAT 8, est, encore, un utilitaire de catalogues sur imprimante ! Pourquoi insister ? Et bien, parce qu'il offre un "plus" non négligeable à mon avis ! Une sérieuse économie de papier !!! Qu'on en juge... Il utilise tout le papier dévolu à son édition : impression en condensé sur les trois-quarts à droite .

Exemple : ajout d'un enregistrement sans réimprimer le catalogue, RUN des principaux programmes.

POUSSIER.BAS

Thierry PELLEN

Il s'agit d'une version en assembleur du programme du CPC infos 52, plus rapide que celle proposée dans le numéro 53, mais qui ne fonctionne qu'en MODE 0. Pour accélérer encore un peu la chute des pixels, on peut forcer la routine à laisser de côté certaines couleurs d'encre en modifiant les octets &9800...&980f : poke &9800+x,&ff autorise la chute des pixels de couleur "x", poke &9800+x,0 l'interdit.

COINS.BAS

Thierry PELLEN

Ce programme permet d'afficher un écran placé en &4000 en partant des coins ou du centre de l'écran. On peut également n'afficher qu'une partie de cet écran, ou remplir l'écran avec une couleur donnée. Tout ça uniquement en MODE 0. Utilisation de la routine : CALL &9600 pour initialiser. CALL &9603, x1, y1, x2, y2, sens, couleur pour lancer l'affichage. • x1, y1 et x 2, y2 correspondent aux coins gauche - haut et droite - bas de la fenêtre (x entre 0 et 159, y entre 0 et 199).

- sens = -1 ou 1 détermine si l'affichage doit se faire en partant des coins ou du centre.
- couleur : entre 0 et 15 pour remplir une fenêtre avec une seule couleur, ou -1 pour afficher une image placée en &4000.

PREMIERS.BAS

Thierry PELLEN

Un PAK paru dans CPC infos 52 proposait une méthode pour obtenir une liste de nombres premiers. En voici une autre, un poil plus rapide, due à ce vieux roublard d'Eratosthène (3ème siècle avant JC, ça ne nous rajeunit pas). Eratosthène nous donne la liste des nombres premiers entre 1 et 1000 en 7 secondes, contre 43 secondes pour l'autre méthode. Chapeau, Eratosthène !

KEYDEF.BAS

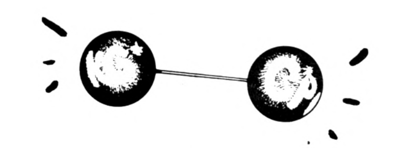

Thierry PELLEN

Ce programme redéfinit les touches du clavier pour obtenir rapidement des instructions du Basic. Exemple : CTRL + L donne LOCATE, CTRL + C donne MODE 2 : CAT...

YOYO1.BAS et YOYO2.BAS

Thierry PELLEN

Ces deux programmes tout simples ont des effets sympas : donner l'impression que l'écran rebondit et afficher un écran par le bas.

BANQUISE

Christophe MICHET

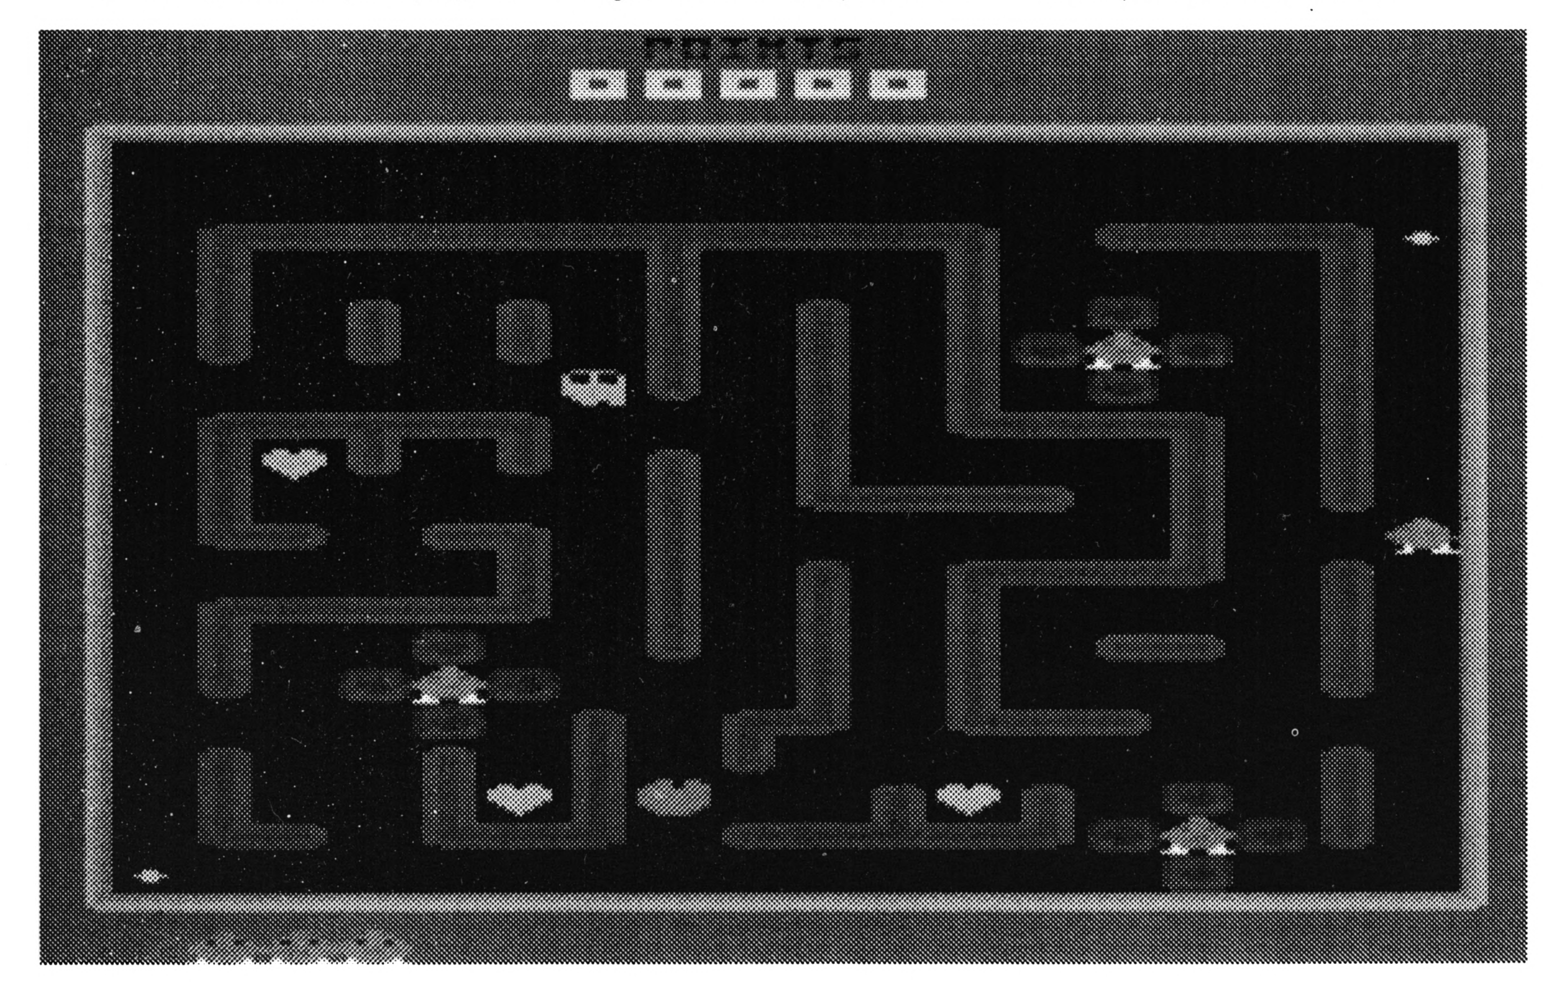

Valable pour CPC 6128

Vous êtes Pingo, un petit pingouin et vous devez délivrer vos congénères qui sont prisonniers de la banquise avant que la mer ne les atteigne.

FICHIERS	: BANQUISE BAS	1ko
	: BQ1. BAS	26ko
	: DESSIN.BAS	4ko

Pour cela, il vous suffit de ramasser les coeurs puis de toucher les pinguoins. Mais attention : la mer tue les pinguoins, la mer détruit les coeurs, deux monstres rôdent et si vous avez encore un pinguoin à délivrer et qu'il n'y a plus de coeurs, vous devez attendre que le pinguoin soit englouti par la mer. Bonne chance !

Si vous avez des tailles différentes pour les fichiers Basic, sauvez les en ASCII (SAVE «NOM»,A). Eteignez votre CPC, tapez POKE &AC00,1 puis ENTER. Chargez votre programme normalement (LOAD «NOM») puis, à l'apparition du Ready sauvez-le avec SAVE «NOM». La taille doit alors être identique à celle de la revue.

DISCUT

Thierry PELLEN

Valable pour CPC 6128

Ce programme permet de gérer des disquettes aux formats DATA et SYSTEM, ainsi que DATA+ et SYSTEM+ (42 pistes de 10 secteurs).

Vous pouvez copier des fichiers ou une disquette entière, obtenir le plan d'occupation de la disquette, effacer, renommer, récupérer et obtenir des renseignements sur des fichiers. Toutes ces fonctions sont utilisables sur des disquettes DATA+/ SYSTEM+, le programme reconnaît automatiquement ces formats. Discut dispose pour les copies d'un buffer de 87Ko sur 6128, de 23Ko sur 464/664.

L'utilisation du programme est très simple :

Dans les menus, vous vous déplacez avec les touches fléchées et validez avec RETURN, COPY ou en tapant le chiffre ou la lettre qui précède la fonction. Lorsque vous aurez à choisir un ou plusieurs fichiers, baladez-vous sur le catalogue avec les touches fléchées, choisissez ou annulez avec ESPACE, et continuez avec RETURN ou COPY. Si vous voulez retourner au menu principal, appuyez simplement sur RETURN. Pour la copie disk ou le formatage, choisissez les pistes de début et de fin avec les touches fléchées, validez avec RETURN, et annulez avec ESC. A tout moment, il est possible de revenir au menu principal en appuyant sur ESC.

• Copie fichiers :

Vous pouvez transférer des fichiers entre des disquettes formatées en DATA, SYSTEM, DATA+, SYSTEM+ sans vous occuper de rien. Choisissez autant de fichiers que vous en avez envie et suivez le guide.

• Copie rapide de disquette :

Pas d'affolement, vous ne pouvez copier ici que des disquettes aux formats déjà cités. Là aussi, suivez le guide.

• Formatage :

Après avoir formatée une disquette au format DATA+ ou SYSTEM+, DISCUT vous propose d'installer un programme d'initialisation sur la disquette. Avant toute utilisation d'une disquette au format étendu, vous devrez lancer ce programme. Il installe deux routines, l'une en &BDF7 et l'autre en &BE80. Pour lancer un programme binaire à partir du BASIC, tapez CALL &BE80, »toto.bin» au lieu de RUN »toto.bin» si ce programme doit ensuite charger des fichiers à partir d'une disquette DATA+/SYSTEM+.

• Plan d'occupation :

Le programme affiche en gris clair le plan d'occupation complet du disk, et en gris foncé les blocs occupés par le fichier choisi au catalogue. Le curseur se trouve au départ sur le premier bloc de ce fichier et bouge avec les touches fléchées. Pour obtenir des renseignements sur le fichier courant (voir en haut à droite de l'écran), appuyez sur RETURN, ESPACE ou COPY. Vous pouvez également cliquer sur la zone gris foncé : elle suivra alors le curseur sur l'ensemble du plan.

• Renseignements sur des fichiers :

Ces renseignements sont : état du fichier (protégé contre l'effacement, invisible au catalogue de l'AMSDOS), taille en ko, adresse de chargement, longueur, adresse d'exécution.

• Effacer, récupérer des fichiers :

Le programme vous demande à chaque fois de confirmer. La récupération s'effectue en transférant le fichier du USER 229 vers le USER 0.

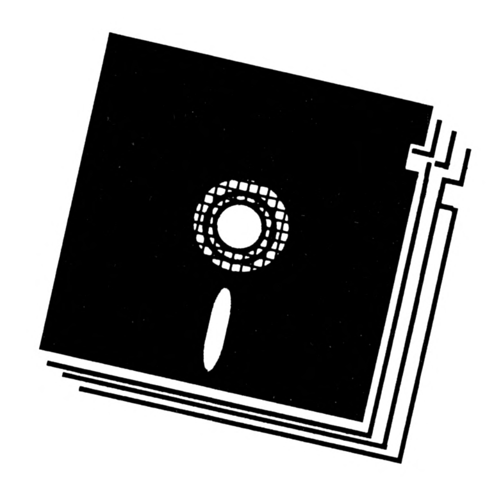

• Renommer des fichiers :

Le format des noms de fichier que vous entrez est standard : le USER de 0 à 255, 8 lettres pour le nom et 3 pour l'extension. Le programme demande ensuite si vous désirez protéger ce fichier contre l'effacement ou le rendre invisible au catalogue de l'AMSDOS.

Le programme est décomposé en deux fichiers :

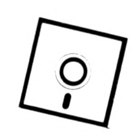

- DISCUT.LOD génère DISCUT.000
- RELOG.LOD transforme DISCUT.000 en fichier exécutable sous le nom DISCUT.BIN.

PETITES ANNONCES

La place réservée aux petites annonces est limitée. En conséquence, celles-ci passent dans leur ordre d'arrivée. Par contre, les petites annonces farfelues sont systématiquement rejetées... De même, comme il est peu probable qu'il existe des "généreux donateurs" de matériels ou de logiciels, les petites annonces faisant appel à ces philantropes ne seront insérées que si la place le permet.
Seront refusées toutes les annonces visant à vendre ou échanger des listes ou copies de logiciels non garantis "d'origine", ainsi que toute annonce incitant au piratage. En conséquence, réfléchissez bien avant d'envoyer vos textes. Les petites annonces doivent impérativement nous parvenir sur la grille (découpée ou photocopiée), le texte étant rédigé à raison d'un caractère par case.
Enfin, toute annonce non accompagnée de timbres ne sera pas insérée.

SCRYPTE

4ème PARTIE

Vincent COIFFIER

Valable pour CPC 464 – 664 – 6128

Description du fichier «IMPINIT.BAS»

Le listing contient les fonctions nécessaires à la modification du fichier SCRYPT2.BIN. (L'ancienne version sera alors écrasée et portera l'extension «.BAK»), il permet alors de personnaliser le logiciel «SCRYPTE» à différents types d'imprimantes.

Pour l'impression, on utilise le mode quadruple densité et de plus, les codes envoyés à l'imprimante sont sur 7 bits pour être compatible avec la norme utilisée par AMSTRAD. (L'utilisation avec une interface 8 bits est tout de même possible puisque le huitième bit n'est jamais utilisé et reste toujours nul).

Il vous permet de modifier les principaux codes de contrôle et donc ceux placés d'origine (pour l'imprimante DMP 2160) qui sont les suivants :

- Séquence d'initialisation : &1B &40 &00
- Définition d'un saut de ligne en n/216 de pouce : &1B &33 ???
- Graphique quadruple densité : &1B &SA ???

Les caractères «???» indiquent qu'aucun code ne figure à cette po-

UTILISATION DE LA POLICE ELECTRO.POL

Cette police permet de réaliser des schémas en électronique à l'aide des caractères proposés dans cette police:

x Pour les connexions, on dispose :

- des chiffres du clavier alphanumérique ou du pavé numérique dont la disposition est mentionnée ci-dessous :

7	8	9
4	5	6
1	2	3

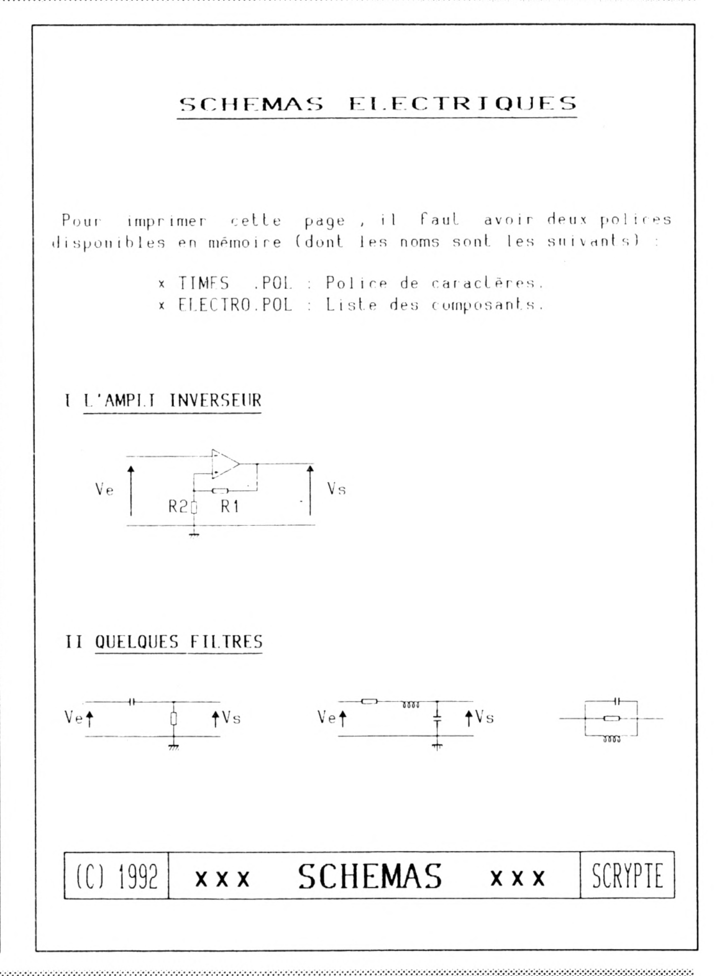

0	-

- des touches suivantes pour connecter la sortie de l'ampli op (consulter la page suivante) au reste du montage :

SCHEMAS ELECTRIQUES

Pour imprimer cette page, il faut avoir deux polices disponibles en mémoire (dont les noms sont les suivants) :

x TIMES .POL : Police de caractères.
x ELECTRO.POL : Liste des composants.

I L'AMPLI INVERSEUR

II QUELQUES FILTRES

(C) 1992 | xxx SCHEMAS xxx | SCRYPTE

sition car la séquence est composée seulement de deux codes, les suivants étant générés par le programme (celle-ci nécessitant d'autres paramètres).

D'autres problèmes peuvent survenir lors de l'impression :

• Saut de page avant la fin de la page A4
→ Vérifier la position du switch longueur de page.

• Saut de ligne en trop
→ Vérifier l'état du sélecteur D&P CR de l'imprimante.

• Affichage du message «Imprimante hors ligne ou déconnectée»
→ Vérifier que :
- l'imprimante est bien branchée.
- le voyant ON LINE est allumé.
- le papier est présent dans l'imprimante.

Nota : il est possible de réaliser des titres plus larges en utilisant le mode double densité à la place du mode quadruple densité. (Le nombres de caractères par ligne est alors limité à 30 compte tenu du rapport qui existe entre les deux densités et de plus la qualité est un peu moins bonne).

Pour réaliser cette opération, il suffit de placer dans le champ «Graphique quadruple densité» la séquence de codes pour obtenir le mode double densité dont les valeurs (pour l'imprimante DMP 2160) sont exprimées ci-dessous :
